ST Publishes Statistics on Malaysian Energy Industry

Putrajaya, Feb 17 – The Energy Commission (ST) recently published the Energy Statistics Handbook 2016, a comprehensive and handy guide that summarises the key energy data and statistics in Malaysia.

The handbook, consisting ten sections, gives an overview on how the trend changes over the years and portrays the mechanism of energy in Malaysia, from the production of primary energy supply, to how the energy supply is transformed and finally the energy consumption by various end-users.

It also includes energy prices, energy indicators, as well as the energy balance tables as of 2014. This handbook also covers the electricity and piped gas supply performance for 2015.

The data are updated annually, and disseminated to public through its publication every year. It serves as a general reference for policy makers, public and private organisation, students and general public.

The handbook is also available from the ST website at <http://www.st.gov.my>

About The Energy Commission

The Energy Commission (Suruhanjaya Tenaga - ST) is a statutory body responsible for regulating the energy sector, particularly the electricity and piped gas supply industries in Peninsular Malaysia and Sabah. The Energy Commission ensures that the provision of electricity and piped gas to consumers is secure, reliable, safe and reasonably priced.
